

- **Simplified Scheduler Querying** [DONE]

- Added support to query **all schedds** with schedd=ALL to reduce operational overhead.
- Motivation: maintaining a full list of schedds is a burden, especially during transitions.
- Discussed behavior options:
 - Retrieve schedd list at frontend startup and keep in memory.
 - Retrieve **every cycle with caching** (e.g., 1 hour) to handle failures gracefully.

- **Controlled Overloading** [ONGOING]

- Introducing option to overload a **subset of nodes** for a specific entry.
- Overload is specified as a percentage.
- Selection is **based on a random number** generator to distribute load probabilistically.

- **Improved Tarball Validation** [NEXT]

- Enhanced get_tarballs to **warn** when **DEFAULT_TARBALL_VERSION** is missing.
 - Prevents creation of **invalid XML tarball files** due to undeclared defaults.
- Identified **issue with setting 23.0.x as default** — needs to be fixed.
